### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Adenike A. Adebisi on April 13, 2006.

The application has been amended as follows:

#### IN THE CLAIMS:

Claims 1, 4, and 5 are amended as follows:

- In claim 1, line 4, replace "formed at" with –affixed to–.
- In claim 4, insert at the end of the claim –; wherein a mode field diameter of the spot is less than 10  $\mu\text{m}$ –.
- In claim 5, insert at the end of the claim –; wherein a mode field diameter of the spot is less than 10  $\mu\text{m}$ –.

***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

The previous reasons for allowance are incorporated herein and the following additional comments are submitted with respect to claims 1, 4, and 5 in view of U.S Patent No. 5,638,471 to Semo et al. ("Semo").

With respect to claim 1, the claim as currently amended is considered patentable over Semo. In particular, claim 1 now recites that the refractive lens having a hyperbolic shape is *affixed to* a second end of the graded-index lens. In contrast, the Semo patent shows (Fig. 11) that the hyperbolic shaped lens 20 is affixed to a polarization maintaining fiber 10 rather than the graded-index lens 50. Furthermore, there is no suggestion in Semo to modify the hyperbolic lens 20 so as to be affixed to the graded-index lens 50. Thus, claim 1 and its dependent claims are considered patentable over Semo.

With respect to independent claim 4, the claim as currently amended is also considered patentable over Semo. In particular, claim 4 now recites that a mode field diameter of the diffraction-limited spot is less than 10  $\mu\text{m}$ . In contrast, Semo is silent as to the mode field diameter of the diffraction limited spot. Semo also appears to lack sufficient detail to suggest that a mode field diameter of less than 10  $\mu\text{m}$  is inherently present. Furthermore, it is the position of this Examiner that it would not have been obvious to modify Semo to achieve the invention of claim 4 absent the Applicant's own teachings. Thus, claim 4 is considered patentable over Semo.

With respect to independent claim 5, the claim as currently amended is also considered patentable over Semo. In particular, claim 5 now recites that a mode field diameter of the

diffraction-limited spot is less than 10  $\mu\text{m}$ . In contrast, Semo is silent as to the mode field diameter of the diffraction limited spot. Semo also appears to lack sufficient detail to suggest that a mode field diameter of less than 10  $\mu\text{m}$  is inherently present. Furthermore, it is the position of this Examiner that it would not have been obvious to modify Semo to achieve the invention of claim 5 absent the Applicant's own teachings. Thus, claim 5 is considered patentable over Semo.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
